Connect the cylinder, regulator, and manifold

1. Close the cylinder hand valve all the way, and connect the regulator (b) to the cylinder (a); thread the regulator nut onto the cylinder valve, and tighten enough to seal. Do not over-tighten.
2. Attach a barbed swivel to the output of the regulator and tighten. Do not over-tighten.
3. Soften the ends of the 3’ length of 5/16” gas tubing by immersing the ends in warm water for several minutes.
4. Slide two hose clamps onto the 3’ length of 5/16” gas tubing. Push one end of the tubing onto the end of the barb swivel on the regulator. Push the other end onto the barbed end of the manifold (c)

Tighten one hose clamp around the tubing and barb on each end- enough to seal but not enough to tear or cut the tubing.

Assemble and connect the gas lines

5. Soften the ends of two 4’ lengths of 5/16” gas tubing by immersing the ends in warm water for several minutes.
6. Slide two hose clamps onto each 4” length of 5/16” gas tubing. Push one tube onto each of the manifold (c) barbs. Push the opposite end of each tube onto a barbed swivel.

Tighten hose clamps around each barb and around each barbed swivel - enough to seal but not enough to tear or cut the tubing.
7. Screw each barbed swivel with line onto one of the gray gas disconnects (d) (included in our kit).
8. Connect the gray disconnects to the keg (f) gas posts. The gas posts have a groove/notch at the bottom of the post for identification. Lift up on the disconnect ring, push onto post, and release ring.

Assemble and connect the liquid lines

9. Soften the ends of two 5’ lengths of 3/16” liquid tubing by immersing the ends in warm water for several minutes.
10. Slide four hose clamps onto each 5’ length of 3/16” liquid tubing. Push one end of the tubing onto each of the black liquid disconnects (e). Push a picnic faucet into the other end of each tube.

Tighten hose clamps around picnic faucet tube and barb connection and tube and barb connection to disconnect - enough to seal but not enough to tear or cut the tubing.
11. Connect the black disconnects to the keg (f) liquid posts. Lift up on the disconnect ring, push onto post, and release ring.

Open the cylinder valve, adjust your regulator, open the manifold valve(s) to the keg(s), and you’re ready to pour!
